KTS

A German Quality Kalium Thiosulfate (Potassium Thiosulfate)

A Genius Formulation to Work as Dual-Purpose Product

Guaranteed Content:

Elements	Minimum Concentration (W/W)
Potassium (K ₂ O)	27%
Sulfur (S)	18%

Kalium Thiosulfate or **Potassium Thiosulfate** known as KTS, is mostly similar to potassium sulfate but with a small difference. A chemical difference which might be small but the effect in field is big. The chemical formula of normal potassium sulfates is K₂SO₄, but there is a new version of this product which is called Potassium Thiosulfate (KTS) with chemical formula of K₂S₂O₃. It has three oxygen molecules instead of four, and it also has two sulfur molecules instead of one. This gives great advantages to KTS.

Potassium thiosulfate or what is called Kalium Thiosulfate in German (KTS), is a chlorine-free product with following specifications:

- Liquid form with high solubility
- Free of chlorine
- High absorption efficiency
- Fast reaction in soil and plants
- Affecting plant growth, yield and quality
- Increasing plant resistance against biotic and abiotic stresses
- Improving the aroma and taste of fruits
- Increasing the oil content of the oil crops
- Suitable for foliar application, drip or sprinkler irrigation and flood irrigation

Appearance: Light Blue

Package: 1,3,5,10 and 20 L

We are using the most innovative German science and technology advancements to make fertilizers:

- AminoGarten® (Liquid Amino Acid)
- HumiGarten® (Liquid Humic Acid)
- Kalium Thiosulfate (KTS)

**THE MISSION IS TO MAKE FARMING MORE PRODUCTIVE AND MAKE
AGRICULTURAL PRODUCTION MORE COST-EFFECTIVE**

AminoGarten®
A German Quality Amino Acid Product
A Genius Growth Promoting Formulation

Guaranteed Content:

Elements	Minimum Concentration (W/W)
Total Amino Acid	50%
Free Amino Acid	15%
Total Nitrogen	8%
Organic Nitrogen	7.5%
Organic Carbon	27%

AminoGarten® is a liquid mixture of 17 free amino acids, which are characterized by their nutritional, technological or aromatic properties.

It could be applied in soil or to plants leaves during the vegetative and productive growth stages. AminoGarten® will:

- Increase chlorophyll content and photosynthetic activity
- Improve plant growth and yield
- Enhance the quality of the products including their taste and color
- Improve plant resistance to abiotic stresses
- Contribute to the nutrition of the micro-organisms in soil
- Stimulate seed germination
- Be suitable for organic farming

Appearance: Dark Yellow Liquid

Package: 1,3,5,10 and 20 L

HumiGarten®
A German Quality Liquid Humic Acid Product
A Genius Formulation to Favor Soil and Crops

Guaranteed Content:

Elements	Minimum Concentration (W/W)
Total Humic Extract	22%
Humic Acid	19%
Fulvic Acid	3%
Total Potassium (K ₂ O)	5%
Total Dry Matter	40%

HumiGarten® should be applied to soil several times from the beginning of the growth season, depending on soil conditions. It can be also used for seed treatment before sowing for better germination of the seeds.

Obtained from high quality leonardate with high purity and low in heavy metals content, HumiGarten® will Increase:

- Soil water retention capacity
- Soil cation exchange capacity
- Soil aeration
- Availability and absorption of macro and micronutrients by plant roots
- Soil microbial activity
- Root system development
- Plant growth and yield
- Quality of the fruits

Appearance: Black Liquid

Package: 1,3,5,10 and 20 L
